In early February 1954, the former SAG enterprise in Espenhain forwarded to the Main Administration for Liquid Fuels in the Production Area for Chemistry of the East German Ministry for Heavy Industry the 1953 annual balance which was drawn up while the Russians were still in Espenhain. Efforts made previously by the Main Administration to obtain this report before the Russians left the plant had been unsuccessful. The following table lists figures on the 1953 production of the Espenhain plant. 1/

1/  Comment: The nomenclature in the German text for this production is "Warenproduktionsausstoss 1953". It means the total production minus that part of it which was consumed in the factory. For instance, production of raw coal during 1953 was more than 11 million metric tons, but most of it was used up in the plant.
